

Alex Thacker

Full-Stack Developer

SUMMARY

I am a Full-Stack Developer with over 14 years of experience, and I pride myself on creating accessible, user-friendly websites that perform well. My flexibility and problem solving skills allow me to find solutions to real problems. With education and experience in both Design and Programming, I can effectively work with clients and designers: assessing requirements, creating wireframes, filling in the gaps in designs, or even filling the role of designer.

EXPERIENCE

RKG Creative

2011 – 2025

Web Developer | Miami, FL

Impact

When I started working at RKG Creative, they were using outdated techniques. In addition to creating new projects and maintaining ongoing projects, I took the initiative to rewrite and redesign all of their websites to be mobile friendly, use responsive design, be accessible, and be easier to maintain using modern coding techniques.

Highlighted Projects

- **Outshine Film Festival** – Designed and programmed a fully custom back-end and front-end using CakePHP (an object-oriented MVC framework for PHP). Also created a photo gallery using Facebook API, and custom Newsletter and SMS sign-up using Constant Contact API
- **Perception Neuron** – Created and maintained a global e-commerce website in Drupal 7 and later migrated to Shopify, creating custom theme components using the Liquid Templating Language.
- **Hi5 VR Glove** – Designed and programmed a global e-commerce website using Drupal 8 as a front-end for a Shopify store. Created custom theme, plugins, and

integrations

- **Mocap Market** – Created a Drupal based, searchable library of motion capture clips that utilizes three.js to display interactive 3D files. Also created a script in Blender Python API to automatically export standardized video thumbnails to replace the time consuming and inconsistent method of using screen captures
- **Jewish Foundation for the Education of Women** – Collaborated with an RKG designer to bring the foundation's vision to life. Create a WordPress website that is easily editable using Elementor. Created a custom wordpress theme, and custom plugins for wordpress including creating new widgets for Elementor. Also provided training and created a reference manual for editing the website
- **Royal Caribbean** – Worked with Royal Caribbean HR to create a recruiting system to replace their third party provider, giving them greater flexibility and saving them on large, recurring expenses. Also created internal tools for communication with their Hiring Partners

Additional Responsibilities

- **Client Communication** – Clients often found it fast and easy to reach out directly to me with any questions or updates to their projects
- **Server Management** – Maintained several CentOS and AlmaLinux servers that used cPanel or Plesk. Provisioned and managed Google Compute Engine servers. Oversaw migration and consolidation of servers.
- **Project Management** – Determined project scope, wrote proposals and budgeted projects

University of Miami Library

2006 – 2009

Assistant Web Developer – Special Collections | Miami, FL

Overview

Worked closely with the Digital Repository Librarian to create microsites for the Cuban Heritage Collection, Special Collections, and University of Miami Archives. This allowed the public to gain an understanding of what was included in these sometimes otherwise inaccessible collections.

EDUCATION

University of Miami

2009

Bachelor's of Science in Communications

Double Major in Computer Science and Visual Communications

SKILLS

- PHP
- Wordpress
- Drupal 7+
- Design & Page Layout
- Responsive Design
- RESTful Services
- Bootstrap
- Object Oriented Programming
- CSS3
- SCSS/SASS
- HTML5
- Javascript
- MySQL
- C#
- NPM
- UI/UX Prototyping
- Python
- Shopify
- Linux
- Server Management
- Java
- jQuery
- Adobe XD
